

Dice Play Activity Card

This game may seem like a simplified ring toss. However, it incorporates so many learning and development opportunities, including their mathematical and gross motor skills, hand to eye coordination as well as encourage them to take turns.

WHAT DO I NEED

1. Pile of small items you can throw i.e. Lego, bean bags, small toys
2. Shallow bucket or a box
3. Dice (or die)
4. Chalk or tape

METHOD

1. In the garden create a start line on the floor with either chalk or a line of tape, and place the items on the floor behind the start line
2. Place the bucket approximately 3-5 feet away from the start line
3. Ask your child to roll the dice and encourage them to identify the number on the die
4. They can then try to gently toss that number of items into the bucket
5. Take turns until all the items are spent
6. Ask your child to then count the total items in the bucket
