

Frozen Paint Activity

A fun and simple activity to enjoy whilst the sun is shining. Show your child how the liquid of the paint changes when frozen and then transforms back to liquid as the paint melts.

WHAT DO I NEED

- Paint
- Lolly sticks
- Ice cube tray

METHOD

1. Squeeze the paint into the ice cube tray.
2. Place a stick in each compartment (they may lean but that's okay)
3. Let it set overnight in the freezer.
4. Dip the bottom of container in warm water to loosen.
5. Time to paint! (You can let your child take their paint into the garden and create large scale artwork on the floor)
